Portfolio: https://anithpavan.github.io/Anith_portfolio/

EDUCATION

Audisankara College of Engineering & Technology | B. Tech in Artificial Intelligence & Data Science | 2023-2027 | CGPA: 7.71/10

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL
AI/ML & Frameworks: Computer Vision, TensorFlow, Keras, PyTorch, OpenCV, Deep Learning
Web Development: Flask, Node.js, Express, React, React Native, Git, Bootstrap, REST APIs, Responsive Design
Tools & Databases: GitHub, Docker, VS Code, Jupyter, MongoDB, PostgreSQL, Render

INTERNSHIP EXPERIENCE

Full Stack Developer Intern | Blend Vidya EdTech, Bengaluru | November 2025 - February 2026 [Certification](#)

- Contributed to production-level web applications using Flask, Node.js, JavaScript, HTML, CSS, and ML models
- Designed and implemented RESTful backend APIs with Flask for authentication, data flow, and application logic
- Developed and deployed a full-stack employee self-tracking system during internship at Blend Vidya EdTech, delivering a live production application [.https://placements.cloud](https://placements.cloud)

Debugged and resolved critical backend API failures including ERR_CONNECTION_REFUSED, 404 Not Found, and Axios network errors while developing an employee self-tracking system.
Diagnosed port mismatches, corrected REST route configurations, and aligned frontend API calls with backend controllers to restore full admin dashboard functionality.

KEY PROJECTS

AI Image Identification System | Python, Flask, TensorFlow, Keras, OpenCV, HTML/CSS/JS [GitHub](#)

- Developed AI-based image identification models to classify livestock (buffalo vs cattle) and fruit types using deep learning and computer vision techniques.

AI Face Detection for College Attendance | Python, OpenCV, DeepFace, Flask, Pandas [GitHub](#)

- A real-time face recognition attendance system that automatically detects and recognizes faces from a live camera feed and logs attendance with timestamps

Crop Calendar Awareness System | Python, Flask, HTML/CSS, JavaScript, Bootstrap, Pandas [GitHub](#)

- The system uses a Flask REST API backed and a dynamic fronted interface to filter crop data based on location and season, helping users explore suitable crops efficiently

OPEN SOURCE CONTRIBUTIONS

- UNICEF Bebbo (React Native):** Authored Windows environment setup guide for Android builds, PR #1045 merged
- JdeRobot RoboticsAcademy:** Setup robotics simulation environment and implemented Follow Line simulation
- ML4SCI (Stingray):** Submitted **PR #923** to Stingray (ML4SCI), adding and validating a TOA calculation notebook compatible with the latest library dependencies.
- OpenAstronomy:** Prepared GSoC proposals for astronomy-related ML projects
